September 2017 - June 2018

Remote

- Revamped UI for customer-facing e-commerce site with 1000+ unique visitors per month
- Improved the website hierarchy and SEO
- Rendered high quality logo designs and marketing graphics

## PROJECTS

### Bands On Demand

This personal project required engineering a web-based application using React to develop the UI. This app assists with finding venues that host live music bands in the Austin, TX area. Google Maps API and Foursquare API were used to extract real-time data. Fetch was used to make asynchronous requests and handle returned data. Also, best practices included consistent use of the command line and Git for version control.

### MyReads React Application

The purpose of this project was to utilize React to manage the user interface state of a book app. Was provided a Book API that was used to connect to a database on various book specs. With this data, I built reusable React components that would render the books to a target bookshelf.

PRO tip: click on the company or project name to see it live!

## SUMMARY

Versatile web developer and UI designer with experience creating custom websites and applications with JavaScript, PHP and React. Strong collaboration skills, skilled debugger and thrives in fast-paced environments. Specializing in UX/UI and mobile-first development.
